CVK VERANO UNITS

THE PROPER TEMPERATURE THROUGHOUT THE YEAR

Trench heating and cooling units are mounted in the floor void. As the part of the system they ensure the proper temperature and optimal microclimate in both summer and winter. 2-pipe fan assisted units (CVK2) use the same 2-pipe installation both for heating or cooling, while 4-pipe units (CVK4) have 2 separate circuits: one for heating and one for cooling. Such a system is most suitable for low-temperature installations (i.e. to work with air source heat pumps), thanks to the highly efficient exchanger for both cooling and heating and to a fan in EC technology powered by a safe voltage 24 V DC.

The smooth regulation of the fan mode with an analogue 0-10 V signal guarantees that the device is adjusted to the actual room heating or cooling thermal requirements. Climaconvector units can be equipped with automatic balancing valves that precisely regulate the flow and pressure in the installation. CVK units are equipped with a drip tray that allows removing condensate drainage by gravity or by a condensate pump (which is additional equipment). Warm or cold air is distributed by the fan directly to the glass façade to create a barrier that reduces heat loss in the winter and heat gains in the summer. This feature ensures that an appropriate microclimate in the room throughout the whole year is secured.

The heating and cooling outputs have been tested in accordance with the European Standard EN 16430. The recommended control system, wireless control or solutions allows CVK unit to be incorporated into BMS systems (BACnet standards, KNX and Modbus) and ensures the CVK unit can work in any building, regardless of the planned control or automation system. Details of the installation are included in the CVK4 units Installation and maintains manual chapter.

ADVANTAGES

HIGHLY EFFICIENT HEAT EXCHANGER AND FAN

Made of aluminium fins and copper tubes highly efficient heat exchanger with the modern EC 24V DC fan maintain thermal comfort in the room.

LEVELLING FEET SYSTEM

Levelling feet allows to adjust the height of the heater in easy and fast way.

HYDRONIC INSTALLATION BALANCING

Units can be equipped with PICV valves and 0-10 V thermal actuators that regulate installation pressure and heating/cooling water temperature.

DEDICATED CONTROL SYSTEM

Modern room controllers allow for full control of heater operations.

BMS CONTROLS

VERANO offers 3 types of BMS control solutions for fan assisted units: BACnet, KNX and Modbus controls.

WIRELESS CONTROL

Now it's a child's play to precisely control the CVK units with use of your mobile, tablet or computer.

TOOL FOR DESIGNERS

Our products are available in the renowned INSTALSOFT, SANKOM and AUTODESK REVIT design programs.

EN 16430 STANDARD

CVK units have been tested according to the European Standard EN 16430. That confirms high quality of the products.

VERANO SELECT

This online software allows selecting the proper heating and cooling units according to the requested heating/cooling loads.

HIGH QUALITY

CVK fan assisted units are designed for heating and cooling residential, office, service, hotel, sacral, sport and other types of buildings.

Calculation and selection software, a wide range of available finishing variants and an individual approach to each project make VERANO products the first choice solution.

The trouble-free and economical use of our devices is appreciated throughout world - CVK units ensure the comfort of users of luxury apartments, modern office buildings or industrial New York salons.

Knowledge and experience in the design of heating and cooling devices is based on analyzes, tests and measurements carried out over many years. Scientific and research cooperation with scientists of Warsaw University of Technology, Krakow University of Technology, Lublin University of Technology, Polish Academy of Sciences among others, as well as private research centers allows to continue improvement and verification of the performance of our products.

Excellent technical properties of CVK units have been confirmed at the HLK Stuttgart. Measurements of heating and cooling capacity were carried out in accordance with EN-16430.

CVK heating and cooling units are manufactured in Poland in accordance with EU regulations.

Verano trench convectors are characterized by following documents required by the European Union:

- National declaration of properties in accordance with EN 16430
- EU declaration of properties
- Hygienic certificate PZH.

RESEARCH AND DEVELOPMENT

New CVK units are modern appliances with high efficient heating and cooling outputs. CVK units are available in 4 heights. The shallowest one is only 90 mm high.

The devices have been designed for ecological sources of heat and cold - heat pumps.

The research of heating and cooling power of CVK trench units was carried out in a specially prepared climatic chamber, in accordance with the requirements of the European Standard EN-16430 in cooperation with the HLK Stuttgart laboratory at the Institut für Gebäudeenergetik Universität Stuttgart.

The acoustic power measurement of the CVK series units is carried out in accordance with the European standard EN ISO 3744 at the headquarters of VERANO. The measurement is made at points located on the measuring surface surrounding the tested fan coil over the sound reflecting plane. Thanks to the use of a digital sound analyzer, it is possible to measure broadband as well as in octave bands.

EQUIPMENT

STANDARD EQUIPMENT:

- casing made of galvanized steel sheet in RAL 9005 black,
- highly efficient cooper-aluminium heat exchanger with air vent,
- modern fan with silent and efficient 24V DC EC motor,
- connection space cover,
- fan cover with airflow baffle,
- water connection: 2 x 3/4" female thread,
- trench struts,
- levelling legs,
- condensate drain pan,
- connection stub for condensate drainage installation.

ADDITIONAL EQUIPMENT:

- decorative frame (F or L type) made of natural or anodized aluminium,
- decorative grille made of natural or anodized aluminium, roll-up or linear type,
- casing made of galvanised steel sheet in any RAL colour,
- condensate pump,
- assembly protection fibreboard for transporting and installation,
- raised floor kit,
- casing protective film,
- foil sleeve for heat exchanger,
- anti dust filter (requires rasing the trench 10 mm)
- BMS controls.

- Standard heating and cooling output [W] compliant to EN-16430.
- Cooling output according to the relative humidity 47%.
- Control voltages for the respective modes of operation: Min - 2 V, Med - 4 V, Max - 6 V, Boost - 10 V.
- Min, Med, Max fan speeds are for continuous operations, the Boost mode is for speed heating or cooling.
- Sound power level according to ISO-3745 standard, sound pressure level measured at distance of 2 m to the heater, in a 100 m3 volume room. Reverb time - 0,5 s, room damping - 8 dB(A).

CORRECTIVE FACTORS FOR 90 MM HIGH CVK2 UNITS

Heat output corrective factors for CVK2 90 mm high units for installation temperatures other than 55/45/20 °C for heating and 17/19/28 °C for cooling.

EQUIPMENT

STANDARD EQUIPMENT:

- casing made of galvanized steel sheet in RAL 9005 black,
- highly efficient cooper-aluminium heat exchanger with air vent,
- modern fan with silent and efficient 24V DC EC motor,
- connection space cover,
- fan cover with airflow baffle,
- water connection: 2 x 3/4" female thread,
- trench struts,
- levelling legs,
- condensate drain pan,
- connection stub for condensate drainage installation.

ADDITIONAL EQUIPMENT:

- decorative frame (F or L type) made of natural or anodized aluminium,
- decorative grille made of natural or anodized aluminium, roll-up or linear type,
- casing made of galvanised steel sheet in any RAL colour,
- condensate pump,
- assembly protection fibreboard for transporting and installation,
- raised floor kit,
- casing protective film,
- foil sleeve for heat exchanger,
- anti dust filter (requires rasing the trench 10 mm)
- BMS controls.

- Standard heating and cooling output [W] compliant to EN-16430.
- Cooling output according to the relative humidity 47%.
- Control voltages for the respective modes of operation: Min - 2 V, Med - 4 V, Max - 6 V, Boost - 10 V.
- Min, Med, Max fan speeds are for continuous operations, the Boost mode is for speed heating or cooling.
- Sound power level according to ISO-3745 standard, sound pressure level measured at distance of 2 m to the heater, in a 100 m3 volume room. Reverb time - 0,5 s, room damping - 8 dB(A).

CORRECTIVE FACTORS FOR 120 MM HIGH CVK2 UNITS

Heat output corrective factors for CVK2 120 mm high units for installation temperatures other than 55/45/20 °C for heating and 17/19/28 °C for cooling.

HEAT OUTPUT CORRECTIVE FACTORS FOR CVK UNITS ACCORDING TO THE GRILLE TYPE

GRILLE TYPE	AIRFLOW	CORRECTIVE FACTOR
Roll-up double T-bar profile aluminium grille - 13 mm gap	67%	1,00
Roll-up double T-bar profile aluminium grille - 9 mm gap	63%	0,99
Roll-up closed profile aluminium grille	62%	1,00
Modular snap on profile aluminium grille	62%	0,97
Linear snap on profile aluminium grille	62%	1,08
Linear stainless steel grille	71%	1,09

HEATING OUTPUT AND SOUND PRESSURE OF CVK2-12/35/L

The graphs present how heat output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of heat output is on page no.52.

COOLING OUTPUT AND SOUND PRESSURE OF CVK2-12/35/L

The graphs present how cooling output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of cooling output is on page no. 52.

CVK2 140 MM HIGH

PRODUCT VISUALIZATION

EQUIPMENT

STANDARD EQUIPMENT:

- casing made of galvanized steel sheet in RAL 9005 black,
- highly efficient cooper-aluminium heat exchanger with air vent,
- modern fan with silent and efficient 24V DC EC motor,
- connection space cover,
- fan cover with airflow baffle,
- water connection: 2 x 3/4" female thread,
- trench struts,
- levelling legs,
- condensate drain pan,
- connection stub for condensate drainage installation.

ADDITIONAL EQUIPMENT:

- decorative frame (F or L type) made of natural or anodized aluminium,
- decorative grille made of natural or anodized aluminium, roll-up or linear type,
- casing made of galvanised steel sheet in any RAL colour,
- condensate pump,
- assembly protection fibreboard for transporting and installation,
- raised floor kit,
- casing protective film,
- foil sleeve for heat exchanger,
- anti dust filter (requires raising the trench 10 mm)
- BMS controls.

DIMENSIONS

DIMENSIONS	[mm]
Trench height (H)	140
Trench bottom width (B)	350
Top width / Grille width (Bk)	374
Trench length (L)	800 ÷ 3250

Non- standard (NS) heater lengths are available on request.

ORDER CODE:

HEAT OUTPUT CORRECTIVE FACTORS FOR CVK UNITS ACCORDING TO THE GRILLE TYPE

GRILLE TYPE	AIRFLOW	CORRECTIVE FACTOR
Roll-up double T-bar profile aluminium grille - 13 mm gap	67%	1,00
Roll-up double T-bar profile aluminium grille - 9 mm gap	63%	0,99
Roll-up closed profile aluminium grille	62%	1,00
Modular snap on profile aluminium grille	62%	0,97
Linear snap on profile aluminium grille	62%	1,08
Linear stainless steel grille	71%	1,09

HEATING OUTPUT AND SOUND PRESSURE OF CVK2-14/35/L

The graphs present how heat output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of heat output is on page no.52.

HEATING OUTPUT AND SOUND PRESSURE OF CVK2-14/35/L

The graphs present how heat output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of heat output is on page no. 52.

COOLING OUTPUT AND SOUND PRESSURE OF CVK2-14/35/L

The graphs present how cooling output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of cooling output is on page no. 52.

COOLING OUTPUT AND SOUND PRESSURE OF CVK2-14/35/L

The graphs present how cooling output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of cooling output is on page no. 52.

CVK2 180 MM HIGH

PRODUCT VISUALIZATION

EQUIPMENT

STANDARD EQUIPMENT:

- casing made of galvanized steel sheet in RAL 9005 black,
- highly efficient cooper-aluminium heat exchanger with air vent,
- modern fan with silent and efficient 24V DC EC motor,
- connection space cover,
- fan cover with airflow baffle,
- water connection: 2 x 3/4" female thread,
- trench struts,
- levelling legs,
- condensate drain pan,
- connection stub for condensate drainage installation.

ADDITIONAL EQUIPMENT:

- decorative frame (F or L type) made of natural or anodized aluminium,
- decorative grille made of natural or anodized aluminium, roll-up or linear type,
- casing made of galvanised steel sheet in any RAL colour,
- condensate pump,
- assembly protection fibreboard for transporting and installation,
- raised floor kit,
- casing protective film,
- foil sleeve for heat exchanger,
- anti dust filter (requires rasing the trench 10 mm)
- BMS controls.

DIMENSIONS

DIMENSIONS	[mm]
Trench height (H)	180
Trench bottom width (B)	350
Top width / Grille width (Bk)	374
Trench length (L)	800 ÷ 3250

Non- standard (NS) heater lengths are available on request.

- Standard heating and cooling output [W] compliant to EN-16430.
- Cooling output according to the relative humidity 47%.
- Control voltages for the respective modes of operation: Min - 2 V, Med - 4 V, Max - 6 V, Boost - 10 V.
- Min, Med, Max fan speeds are for continuous operations, the Boost mode is for speed heating or cooling.
- Sound power level according to ISO-3745 standard, sound pressure level measured at distance of 2 m to the heater, in a 100 m3 volume room. Reverb time - 0,5 s, room damping - 8 dB(A).

CORRECTIVE FACTORS FOR 180 MM HIGH CVK2 UNITS

Heat output corrective factors for CVK2 180 mm high units for installation temperatures other than 55/45/20 °C for heating and 17/19/28 °C for cooling.

EQUIPMENT

STANDARD EQUIPMENT:

- casing made of galvanized steel sheet
- in RAL 9005 black,
- highly efficient cooper-aluminium heat exchanger with air vent,
- modern fan with silent and efficient 24V DC EC motor,
- connection space cover,
- fan cover with airflow baffle,
- water connection:
2 x 3/4" female thread (heating)
2 x 3/4" female thread (cooling),
- trench struts,
- levelling legs,
- condensate drain pan,
- connection stub for condensate drainage installation.

ADDITIONAL EQUIPMENT:

- decorative frame (F or L type) made of natural or anodized aluminium,
- decorative grille made of natural or anodized aluminium, roll-up or linear type
- casing powder coated in any RAL colour,
- condensate pump,
- assembly protection fibreboard for transporting and installation,
- raised floor kit,
- casing protective film,
- foil sleeve for heat exchanger,
- anti dust filter
- (requires raising the trench 10 mm),
- BMS controls.

- Standard heating and cooling output [W] compliant to EN-16430.
- Cooling output according to the relative humidity 47%.
- Control voltages for the respective modes of operation: Min - 2 V, Med - 4 V, Max - 6 V, Boost - 10 V.
- Min, Med, Max fan speeds are for continuous operations, the Boost mode is for speed heating or cooling.
- Sound power level according to ISO-3745 standard, sound pressure level measured at distance of 2 m to the heater, in a 100 m3 volume room. Reverb time - 0,5 s, room damping - 8 dB(A).

CORRECTIVE FACTORS FOR 140 MM HIGH CVK4 UNITS

Heat output corrective factors for CVK4 140 mm high units for installation temperatures other than 55/45/20 °C for heating and 17/19/28 °C for cooling.

HEAT OUTPUT CORRECTIVE FACTORS FOR CVK UNITS ACCORDING TO THE GRILLE TYPE

GRILLE TYPE	AIRFLOW	CORRECTIVE FACTOR
Roll-up double T-bar profile aluminium grille - 13 mm gap	67%	1,00
Roll-up double T-bar profile aluminium grille - 9 mm gap	63%	0,99
Roll-up closed profile aluminium grille	62%	1,00
Modular snap on profile aluminium grille	62%	0,97
Linear snap on profile aluminium grille	62%	1,08
Linear stainless steel grille	71%	1,09

HEATING OUTPUT AND SOUND PRESSURE OF CVK4-14/35/L

The graphs present how heat output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of heat output is on page no. 52.

HEATING OUTPUT AND SOUND PRESSURE OF CVK4-14/35/L

The graphs present how heat output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of heat output is on page no. 52.

COOLING OUTPUT AND SOUND PRESSURE OF CVK4-14/35/L

The graphs present how cooling output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of cooling output is on page no. 52.

COOLING OUTPUT AND SOUND PRESSURE OF CVK4-14/35/L

The graphs present how cooling output Φ [W] depends on the respective average temperature differences ΔT [K], for control voltages U [V]. The graphs also present the sound pressure levels for the respective heater operating conditions.

NOTE!

An example readout of control voltages and sound pressure for different values of cooling output is on page no. 52.

CVK4 180 MM HIGH

PRODUCT VISUALIZATION

EQUIPMENT

STANDARD EQUIPMENT:

- casing made of galvanized steel sheet
- in RAL 9005 black,
- highly efficient cooper-aluminium heat exchanger with air vent,
- modern fan with silent and efficient 24V DC EC motor,
- connection space cover,
- fan cover with airflow baffle,
- water connection:
2 x 3/4" female thread (heating)
2 x 3/4" female thread (cooling),
- trench struts,
- levelling legs,
- condensate drain pan,
- connection stub for condensate drainage installation.

ADDITIONAL EQUIPMENT:

- decorative frame (F or L type) made of natural or anodized aluminium,
- decorative grille made of natural or anodized aluminium, roll-up or linear type
- casing powder coated in any RAL colour,
- condensate pump,
- assembly protection fibreboard for transporting and installation,
- raised floor kit,
- casing protective film,
- foil sleeve for heat exchanger,
- anti dust filter (requires rasing the trench 10 mm),
- BMS controls.

DIMENSIONS

DIMENSIONS	[mm]
Trench height (H)	180
Trench bottom width (B)	350
Top width / Grille width (Bk)	374
Trench length (L)	800 ÷ 3250

Non- standard (NS) heater lengths are available on request.

ORDER CODE:

CVK4-18/35/L (L/P)

Trench height [cm]

Trench width [cm]

Trench Length L [cm]

- Standard heating and cooling output [W] compliant to EN-16430.
- Cooling output according to the relative humidity 47%.
- Control voltages for the respective modes of operation: Min - 2 V, Med - 4 V, Max - 6 V, Boost - 10 V.
- Min, Med, Max fan speeds are for continuous operations, the Boost mode is for speed heating or cooling.
- Sound power level according to ISO-3745 standard, sound pressure level measured at distance of 2 m to the heater, in a 100 m3 volume room. Reverb time - 0,5 s, room damping - 8 dB(A).

CORRECTIVE FACTORS FOR 180 MM HIGH CVK4 UNITS

Heat output corrective factors for CVK4 180 mm high units for installation temperatures other than 55/45/20 °C for heating and 17/19/28 °C for cooling.

COOLING

CVK UNIT SELECTION

The selection of heating and cooling unit should be based on the sensible cooling power. To determine the heating power, proceed in the same way as in the case of cooling power.

Exemplary calculations::

Example calculations for the following convector: CVK2-14/35/L
Required sensible cooling output: 845 W
Installation temperatures: $t_s/t_r/\theta_i = 12/16/26$ °C.

METHOD 1 Based on conversion factors.

Read out the right conversion factor for project installation temperatures. In this case conversion factor is 1,189.

Next, divide required cooling output value by conversion factor. The result is 711 W which is required cooling output value for standard installation temperatures 17/19/28 °C.

Last step is to select the CVK units which has slightly higher output than 711 W for installation temperatures 17/18/28 °C. For example CVK2-14/35/225 unit's sensible cooling output is 724 W. But with project installation temperatures it achieves 860 W (724 W multiplied by conversion factor 1,189).

METHOD 2 Based on cooling output and noise level

For installation temperatures read out the average temperature difference (using the graph or equation below).

The example of average temperature readout for installation temperatures: supply: $t_s=12$ °C, return: $t_r=16$ °C, ambient temperature $\theta_i=26$ °C.

1. Draw a horizontal line starting from the supply temperature (12 °C). End the line on the crossing with return temperature line (16 °C).
2. Draw a vertical line to the crossing with ambient temperature line (26 °C).
3. Draw a horizontal line to the left end of the graph. This line indicates the average temperature difference - which is $\Delta T=12$ °C.

1. Next step is to select the unit of suitable dimensions. For example CVK2-14/35/225. For this unit use the graph on the page 22.
2. Draw a vertical line starting with the required output value (845 W). End the line on the crossing with average temperature curved line ($\Delta T=12$ °C).
3. Draw a horizontal line to the left end of the graph. Read out the control voltage value which is 3,9 V. Draw a line to the right end of the graph and read out the Sound pressure level which in this case is 25 dB.

CVK UNIT SELECTION

- METHOD 3
Based on **VERANO SELECT** program

VERANO SELECT programme allows for precise CVK unit selection for any installation temperatures. In this way many of values can be precisely define as a heating or cooling outputs, sound pressure level, pressure drop, water flow and many others. The results of the selection can be print as a table or XLS file.

To use VERANO SELECT programme visit our website www.select.verano-global.com or use the QR code.

PRESSURE LOSS

To define pressure loss value use the graph on the right. For previously selected CVK2-14/35/225 unit difference between supply and return temperature is $\Delta t=4$ K and cooling output is 0,845 kW.

- Use the axis for $\Delta t=4$ K value. Draw a vertical line up starting with cooling output value (0,845kW). End the line on crossing with the length of the CVK unit (2250 mm).
- Draw a horizontal line to the left end of the graph. Read out the pressure loss $\Delta p=4,4$ kPa.

CVK UNITS CONTROL OPTIONS

Heating and cooling CVK units are designed to be installed in a floor void. One can distinguish two basic models of this product that are different through the way they are built and function:

2-PIPES CVK2 UNITS

The heat exchanger has only a single pipe circuit that can be used for heating or cooling. Only one set of valves and thermal actuator is required.

4-PIPES CVK4 UNITS

Two independent copper pipe circuits - one for heating and one for cooling and 2 sets of valves and thermal actuators are required (one for heating and one for cooling installation connection).

As CVK unit is a part of the heating/cooling system in the building they proper operation rely on:

- central heating installation being fitted correctly
- chilling/cooling installation being fitted correctly
- the valves and controls have been fitted, connected and configured properly.

The complete set of controls includes:

- room air controller that should be connected to the thermal actuators and fans,
- 24 V DC rail power supply (transformer)

Thanks to the built-in temperature sensor Room Temperature Controller measure the ambient temperature to keep it on the constant, required level:

- by adjusting the thermostatic valve opening/closing angle
- by adjusting the fan speed.

Due to the ambient temperature sensor the Room Temperature Controller should not be covered by any obstacles such as furniture or curtains.

Each heating/ cooling zone should be controlled by the single Room Temperature Controller.

For BMS systems Room Controller and Temperature sensor is usually split into 2 separate devices.

Due to the use of electric safe fans and low-voltage actuators, fan assisted units must be supplied with 24 V DC power converter.

The 24 V DC power supply should be protected

by an appropriate overcurrent circuit breaker and an installation switch off that allows the power cut off while conducting service work on VERANO products.

It is forbidden to connect the unit directly to the 230 V AC power grid.

An example of power supply selection is shown on page 56.

The recommended type of wiring in the controlling system is LIY or LIYCY.

NOTE!

Electric wiring should be done only by the electrical skilled worker who can confirm his membership in an approved self-certification scheme. Power can only be switched back on when the correctness of the whole wiring was checked and approved.

CVK UNITS OPERATIONS IN VARIOUS CONTROL SYSTEMS

CVK Climaconvectors are suitable for any building and they are easy to select thanks to a variety of available options controlling the unit.

CONTROLLING BY STANDARD ROOM AIR CONTROLLER

Each heating zone has a separate controller, which is responsible for readout of the temperature in the room and controlling the work of connected heating/cooling units. The controllers are not connected to each other, while each of them must be programmed separately.

Example: VER-24S, VER-24 WiFi, SIEMENS RDG160T

CONTROLLING BY ROOM AIR CONTROLLER CONNECTED TO INTERNET

The optional feature, that, when built into the standard wall mounted controller, allows you to manage your heating/cooling system through the smartphone application or a secure website. Through the app you can manage the multiple devices or even create the entire home automation system.

Example: VERANO VER-24 WiFi

BUILDING MANAGEMENT SYSTEM (BMS)

The system that integrates the various technical installations in the building to allow single point of management is commonly known as the BMS. BMS is quite practical in the office and commercial buildings, yet these days might be also met in residential housing installations. When concerning connecting the CVK units into the BMS system, please be aware of such a solution benefits:

- including CVK as a part of the general HVAC in the building by coordinating its operation together with ventilation, A/C and heating/cooling sources,
- combining the operation of multiple home technical appliances into one management scheme by coordination the work between window blinds, lighting, audio / video devices etc.
- better management of your heating system i.e. by more flexible and quicker temperature control from a central communication point
- more flexibility for open space heating/cooling functions such as re-arranging the heating zones when complementing open space re-arrangements.

VERANO offers solutions that enable connecting CVK units into the following BMS systems:

- KNX
- BACnet
- Modbus

Example: Siemens RDG160KN (for KNX system), Produal TRC-1A4R and TRC-3A (for MODBUS and BACKNET systems)

CVK UNITS HYDRONIC CONTROLLING

The advantage of heating and cooling units against the standard off-the-shelf radiators is the optional functionality for providing the cooling during the summertime.

However, using the CVK units requires two separate water circuits, where one is dedicated to heating and the other to cooling (for four-pipe CVK4 units) or alternatively adapting the current installation for servicing LTHW (low-temperature heating water) in the heating season and a coolant from the chiller during the summertime (in the case of 2-pipe CVK2 units). When specifying please bear in mind that the final thermal output of the units is reflected by the differences in the installation water/fluid temperature i.e. the one between the supply and return of the water.

For most of specifications it might be:

- $\Delta t = 2K$ for cooling,
- $\Delta t = 10K$ for heating.

Thermostatic and lockshield valves must comply special requirements due to the high water flow caused by small Δt temperatures.

The range of operation of standard radiator valves used in classic wall, floor or trench convectors allow for maximum flow of the fluid at the level of 150-200 l/h, while valves dedicated to cooling and heating units allow for flow of up to 500 l/h. The use of valves that have an incorrect flow range may cause the noise from the installation noise and could limit the heating and cooling outputs.

Valves designed for use in duct fan coil units allow for the precise temperature controlling in rooms thanks to the integrated differential pressure control. Maintaining a constant flow of heating or cooling medium ensures stable and consistent operation of the fan coil in a wide range of disposable pressure. Autonomous regulation and compensation of differential pressure fluctuations allows for limiting the remaining regulatory armature (e.g. resignation from balancing valves) and facilitates both the design of new installations and the modernization of existing buildings.

THERMAL ACTUATORS AND PICV VALVES

SIEMENS VPD MINI-COMBI VALVES

- Recommended for CVK units
- Pre-set value of kv - achieved by limiting the valve stroke
- Possibility of manual and temporary operation of the installation during assembly works
- The choice of valve depends on flow and the minimum required differential pressure across the valve Δp_{min} :
 VPD A-45 - range 45-104 l/h, Δp_{min} - 0.06 bar
 VPD A-90 - range 90-185 l/h, Δp_{min} - 0.08 bar
 VPD A-145 - range 145-318 l/h, Δp_{min} - 0.1 bar
 VPD B-200 - range 200-483 l/h, Δp_{min} - 0.2 bar
- Model A - measuring pressure drop 0.05 bar (5 kPa)
- Model B - measuring pressure drop 0.1 bar (10 kPa)
- Maximum permissible pressure working: 1000 kPa (10 bar)
- Thermal actuator thread: M30x1,5

0-10V DC CONTROLLING THERMAL ACTUATOR

- Supplied with 24 V DC
- 7,7 W temporary power consumption,
- 1 W constant power consumption
- max current: 320 mA
- max opening/closing time: 150 s

SIEMENS MINI-COMBI VPD VALVE

0-10 V DC THERMAL ACTUATOR

CVK UNIT ADDITIONAL EQUIPMENT

- Pressure module condensate drain - extend the trench length by 100 mm
- Assembly protective fiberboard cover
- Anti dust filter in black colour installed on the fan - increase the trench high by 10 mm
- Support system for raised floor
- Decorative grille and frame
- Valves and control devices

RAIL POWER SUPPLY SELECTION

1. Using the tables for CVK units into this catalogue define the maximum fan power demand and maximum current. Choose the maximum value for units (value for boost mode).
2. Using the data sheet for thermal actuator define the maximum power demand and maximum current. For 0-10 V actuator maximum power is 7,7W and maximum current is 0,32A.
3. Using the data sheet for the controller define the maximum power demand and maximum current. For VER-24(S) maximum power is 1,3W and maximum current is 0,06A.

4. Sum up all power values. Then sum up all current values.
5. Choose the proper rail power supply by choosing the one that has slightly higher power and current values than your power and current values.

Selecting rail power supply with power demand value lower than heater power demand might cause turning off the fan on higher fan speed, and eventually fan failure.

EXAMPLE OF RAIL POWER SUPPLY SELECTION:

There are 3 heating and cooling units in the room:

- 1x CVK2-14/35/155
- 2x CVK2-14/35/225.

There are 3 thermal actuators (each one for one CVK unit). And one Room air controller VER-24.

Using the power and current data for CVK units and controls following values has been defined:

TYPE	MAX POWER	MAX CURRENT
1 x CVK2-14/35/155 heating and cooling unit	1 x 40,8	1 x 1,7
2 x CVK2-14/35/225 heating and cooling unit	2 x 67,2	2 x 2,8
3x 0-10 thermal actuator	3 x 7,7 W	3 x 0,32 A
1x VER-24 Room air controller	1 x 1,3 W	1 x 0,06 A
TOTAL:	199,6 W	8,32 A

Z240-24VDC RAIL POWER SUPPLY HAS BEEN SELECTED (240W / 10A)

CVK UNITS CONTROLS

The controlling function for Climaconvectors is handled through wall-mounted control panel that service the actuators and fans. It has the room thermostat built in that is responsible for measuring room ambient temperature and by regulating the opening angle of the actuating valves and fan revs it will keep the constant room temperature value.

It also offers the optional local temperature control that is managed over the Internet. Such a function is offered by the following controllers: VER-24 WiFi that is dedicated to CVK 2-pipe units and VER-44 WiFi the one to 4-pipe units.

VER-24 S / VER-24 WIFI

- for 2-pipes installation
- room air temperature controlling
- built-in temperature sensor
- inputs for 0-10V DC thermal actuator and for ON/OFF NC/NO thermal actuator
- 24 V DC supplied
- wireless controlling via Wifi (for VER-24 Wifi only)

VER-44 WIFI

- for 2-pipes and 4-pipes installations
- room air temperature controlling
- built-in temperature sensor
- inputs for 0-10V DC thermal actuator and for ON/OFF NC/NO thermal actuator
- 24 V DC supplied
- colour touch display

RDG160T

- for 2-pipes and 4-pipes installations
- room air temperature controlling
- built-in temperature sensor
- inputs for 0-10V DC thermal actuator and for ON/OFF NC/NO thermal actuator
- 24 V DC supplied

CVK2 CONNECTION SCHEME - WITH VER-24 / VER-24 S ROOM CONTROLLER

CVK4 CONNECTION SCHEME - WITH VER-44 WIFI ROOM CONTROLLER

CVK2 / CVK4 CONNECTION SCHEME - WITH RDG160T / RDG160KN ROOM CONTROLLER

An exemplary connection diagram of one or several CVK2 units

SETTING OF OPERATION PARAMETERS RDG160T

Press the two buttons on the regulator for at least 3 seconds. Then release both buttons and press the left button for another more than 3 seconds. Without releasing, turn the controller's knob half a turn anti-clockwise. The display will show the symbol of parameter, that confirms the entry into the service settings mode. The parameter is selected by turning the knob and confirming with the right button (OK). Use the knob to set the desired value, eg changing the setting P52=1, after changing P52=2. Use the right button to accept the selection. After finishing the settings, press the left button (ESC).

An exemplary connection diagram of one or several CVK4 units

CVK4 UNITS INSTALLATION AND MAINTAINS MANUAL

Before starting the assembly, take out and secure the heating kit (fan, airflow targeting sheet and heat exchanger). After that, install assembly struts on the casing edge.

Prepare a trench 100 mm wider and longer than the heater casing. The depth of the trench should be planned to ensure that the top of the grille is on the same level as floor finish level (take into account insulation in the bottom of the trench).

Put the heater casing in the centre of the trench. Point the places for fixing anchors holes in the concrete. Put out the heater casing of the trench.

Remember that fans polluted by dirt and dust coming from the construction works might cause damage of fans or higher sound power level of fans (louder fan work). Damage caused by fan being polluted are not covered by the warranty.

Prepare the appropriate holes for anchoring screws in concrete slab. Drill the holes on marked points and hammer the raw plugs into them.

Place the thermal insulation on the bottom of the trench (on the concrete slab). Remember to do the holes for fixing anchors and levelling feet in insulation. The recommended thermal insulation is Polystyrene.

The thermal insulation layer under the casing should be done of materials of relative deformation factor not less than 70 kPa while compressive strength is at 10%.

Strike the holes for connection pipes and for electric wires. You should strike 3 holes in one side of the casing (longer or shorter side).

Put the casing with levelling feet in the trench. Levelling feet should be placed on the concrete slab. Do not install levelling feet on thermal

insulation. Use the screwdriver to level the levelling feet.

Screw the heater casing using fixing anchors kits. Screw the M8 nut on the fixing anchor until resistance is felt.

Fill the rest of the free areas between the heater casing and thermal insulation with low expandable foam.

Leaving free space between the casing and thermal insulation can lead to increased volume of device.

Install all pipes and electric wires. Secure the connections and all the holes in the casing by using low expandable thermal foam insulation.

Make sure that the casing is properly settled in the trench and all connections are done. Make sure, that assembly struts are installed on the top edge. Put assembly fibreboard cover on the casing to avoid contamination inside the casing.

Pour the concrete around the casing. The minimum height of concrete should be at least 50 mm.

When the concrete gets dry, remove the assembly fibreboard cover and struts. After that, clean the inside of the casing and install the heating kits. In fan assisted trench units type CVK the heat exchanger should be on the glass facade / wall side.

Install valves and thermal actuators (if required) on the pipes of heat exchanger.

Connect the pipes to the valves. Supply pipe is to be connected to the heat exchanger pipe with air vent (on the room side). Connect electric wires to the fan. Use the electric scheme to do the wiring for the thermal actuator and the controls.

Carry in the tightness test for hydronic connections. After completing installation

works, cover the heater with the assembly fibreboard cover to avoid contamination of fan and heat exchanger with dust of the rest of building works. After finishing the rest of building works remove the assembly fibreboard cover. Then install the grille and frame on the casing edge.

Grilles, frames, thermostatic and lock shield valves, thermal actuators, rail power supplies and protective fibreboard are additional equipment accessories.

All assembly work should be carried by qualified in the construction and electrical installers.

Fan coil units can optionally be fitted with an adjustable edge. It enables levelling the discrepancy between the expected and the final height of finish floor level without the need to cut the floor.

When using a heating / cooling unit, do not cover it with a rug, furniture or curtains.

The grilles are resistant to pressure and abrasion for pedestrian traffic of low intensity.

Avoid increased pressure on the grille bars, for example by placing furniture on them.

Periodic cleaning of the fan, heat exchanger and the inside of the casing is recommended due to the efficiency of the unit.

GRILLES

Roll-up grille double T-bar profile

TOP VIEW

SINGLE BAR
CROSS SECTION

STANDARD:

- Spacers 17 mm.
- Distance between the bars - 13 mm.
- Spacers made of black PVC.

Maximum length of one grille section is 6 m.

OPTION:

- Spacers are available in other colours and size:
- grey 13 mm, 8 mm.

GRILLE TYPE	COLOUR	ORDER CODE
Roll-up grille, double T-bar profile - natural aluminium	Natural aluminium	ZDW-1,8/B/L
	Satin	ZADWS-1,8/B/L
Roll-up grille, double T-bar profile - anodized aluminium	Stainless steel	ZADWST-1,8/B/L
	Gold	ZADWZ-1,8/B/L
	Black	ZADWC-1,8/B/L

Roll-up grille closed profile

Roll-up grille, closed profile - anodized aluminium	Satin	ZAALS-1,8/B/L
	Stainless steel	ZAALST-1,8/B/L

Modular grille (made of aluminium)

TOP VIEW

THE GRILLE IS AVAILABLE IN TWO VERSIONS:

- natural aluminium,
- anodized aluminium.

The grilles joints are made of black PVC only.

CROSS SECTION

GRILLE TYPE	COLOUR	ORDER CODE
Modular grille - natural aluminium	Natural aluminium	MPZ-1,8/B/L
Modular grille - anodized aluminium	Satin	MPZAS-1,8/B/L
	Stainless steel	MPZAST-1,8/B/L

GRILLES

Linear grille

TOP VIEW

CROSS SECTION

GRILLE ENTIRELY MADE OF ALUMINIUM.

The grille is available in the following variants:

- natural aluminium (cross – bar joiners are coated in black RAL 9005),
- aluminium coated in any RAL colour (grille entirely coated in RAL),
- anodized aluminium (cross – bar joiners are coated in black RAL 9005).

It is possible to make a corner grille for corner section of the heaters at an angle of 90° and others.

The corner grille can be made only if it is ordered with a heater at the same time.

Maximum length of one grille is 3 m.

GRILLE TYPE	COLOUR	ORDER CODE
Linear grille, snap profile - natural aluminium	Natural aluminium	PZW-1,8/B/L
Linear grille, snap profile - anodized aluminium	Satin	PZWAS-1,8/B/L

F-type frame

ADDITIONAL EQUIPMENT FOR CVK UNITS

Raised floor kit ZPP

Kit contains:

- 1x support
- 2x expansion bolt with a screw
- 4x nut and washer

ZPP kit allow to level the unit up by 50 mm.
Other heights on request.

DUMMY SECTION

Trench units can be produced as non-standard units with custom length adjusted to any recess or bay.

It can be done as:

- extended casing,
- separate dummy section.

CORNER TRENCH AND GRILLE OPTIONS

| Corner trench with linear grille and F-type frame.

| Corner trench with cross-bar grille and F-type frame.

| Corner trench with cross-bar grille and F-type frame. Herringbone grille shape.

| Corner trench with linear grille and F-type frame. Herringbone grille shape.

ATEST HIGIENICZNY BK/9/0062/02/2018
HYGIENIC CERTIFICATE
NATIONAL INSTITUTE OF PUBLIC HEALTH - NATIONAL INSTITUTE OF HYGIENE

Wzrost / product: Klimakonwektor kanałowy CVK2, CVK4
Klimakonwektor kanałowy z dopływem powietrza CVK2P, CVK4P

Zawierający / containing: stal, aluminium, mosiądz i inne materiały wg dokumentacji producenta

Przeznaczony do / destined: montażu w budynkach mieszkalnych jedno i wielokondygnacyjnych, biurowych, usługowych, handlowych, hotelowych, szpitalnych, sportowych, szkoły zdrowia

Wymieniony wyżej produkt odpowiada wymaganiom higienicznym przy aplikacji następujących warunków / The above-named product is acceptable according to hygienic criteria with the following conditions:

- Zakładane urządzenia musi być zgodne z przepisami dotyczącymi obiektów, w których są one montowane
- W obiektach szkoły zdrowia zastosowanie urządzeń z wyposażeniem przeznaczonym do profesjonalnych wymagań higienicznych (zob. załącznik). CDM, takie multimedialne to: 1. w obiektach chirurgicznych 2. urządzenie nie powinno być karbowane bezpośrednio na pacjentów oraz nie powinno powodować umiarkowania tętna i ciśnienia
- Atest nie obejmuje wymagalnych Wzrostu powietrza zamkniętych w sale szpitalnych
- Montaż i eksploatacja zgodnie z poleceniami producenta

Atest higieniczny nie dotyczy parametrów technicznych, użyteczności i właściwości alergologicznych wyrobów / Hygiene certificate does not apply to technical parameters, utility value and allergenic properties of the product
